2008 Consumer Confidence Report

Water System Name: Lower Swall Meadows PWS 2600714 Report Date: June 30, 2009

We test the drinking water quality for many constituents as required by State and Federal Regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2008.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

Type of water source(s) in use: Groundwater wells

Name & location of source(s): WCCSD Wells No. 2 & 4 in Rimrock Ranch

Drinking Water Source Assessment information: A DWSA was conducted on our water system in Oct. 2002 and

results of that Assessment are contained in Appendix A herein.

Time and place of regularly scheduled board meetings for public participation: Second Wed. of the first month of

each quarter at 7PM in the firehouse.

For more information, contact: Harvey VanDyke Phone: (760) 387-2572

TERMS USED IN THIS REPORT:

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant added for water treatment below which there is no known or expected risk to health. MRDLGs are set by the U.S. Environmental Protection Agency.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: Department permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (ug/L)

ppt: parts per trillion or nanograms per liter (ng/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial
 processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural
 application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the state Department of Public Health (Department) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

Tables 1, 2, 3, 4, and 5 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The Department allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently.

TABLE 1 - SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA							
Microbiological Contaminants (to be completed only if there was a detection of bacteria)	Highest No. of detections	No. of months in violation	MCL		MCLG	Typical Source of Bacteria	
Total Coliform Bacteria	(In a mo.)	0	More than 1 sample in a month with a detection		0	Naturally present in the environment	
Fecal Coliform or <i>E. coli</i>	(In the year)	0	A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform or <i>E. coli</i>		0	Human and animal fecal waste	
TABLE 2	- SAMPLIN	G RESULT	TS SHOWING	THE DETE	CTION OF	LEAD AND COPPER	
Lead and Copper (to be completed only if there was a detection of lead or copper in the last sample set)	No. of samples collected	90 th percentile level detected	No. sites exceeding AL	AL	PHG	Typical Source of Contaminant	
Lead (ppb)	5	ND	0	15	2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits	
Copper (ppm)	5	0.3	0	1.3	0.17	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives	

TABLE 3 - SAMPLING RESULTS FOR SODIUM AND HARDNESS						
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	11/03.07	16 mg/l	<1	none	none	Generally found in ground & surface water
Hardness (ppm)	11/03.07	34 mg/l	<3	none	none	Generally found in ground & surface water

	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Fluoride	11/13/07	0.1 mg/l	<0.1	2.0	2.0	Erosion of natural deposits
Nitrate	11/03/07	1.4 mg/l	<1	45	45	Runoff and leaching from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
TABLE 5 - DETE	CTION OF C	CONTAMIN	ANTS WITH	A SECONI	DARY DRIN	KING WATER STANDARD
Chemical or Constituent	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Foaming Agents (MBAS)	11/03.07	0.12 mg/l	< 0.05	0.5	N/A	Municipal and industrial waste distcharges
Chloride	11/03.07	1.2 mg/l	<1.0	500	N/A	Runoff/leaching from natural deposits
Sulfate	11/03.07	5.3	<0.5	500	N/A	Runoff/leaching from natural deposits
Specific Conductance		160	<1.0	1600	N/A	Substances that form ions when in water
Total Dissolved Solids		170	<10	1000	N/A	Runoff/leaching from natural deposits
Zinc		2.6	<0.25	5.0	N/A	Runoff/leaching from natural deposits and industrial-type waste
	TABLE 6	- DETECTI	ON OF UNR	EGULATEI) CONTAMI	NANTS
Chemical or Constituent	Sample Date Lev		- , , , , , , , _ , , , , , , , , ,			Health Effects Language

^{*}Any violation of an MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at

risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Summary Information

No chemical quality of the WCCSD water supply exceeded an MCL or AL during this reporting period. The detection levels shown are for the highest level detected for either Wells 2 or 4. The water system did not have any coliform positives during this year. No radiological sampling was done in 2007.

Appendix A

Drinking Water Source Assessment Vulnerability Summary

A source water assessment was conducted for each of the three wells (No. 1, 2 and 4) of the Lower Swall Meadows public water system by the Mono County Health Department in October, 2002. The sources are considered most vulnerable to the following activities not associated with any detected contaminants:

a. Septic systems - low density

Discussion of Vulnerability

"There have been no contaminants detected in the water supply, however the sources are still considered vulnerable to activities located near the drinking water sources."

A copy of the complete assessment may be viewed at:

Mono County Health Department P O Box 3329 437 Old Mammoth Road, Suite Q Mammoth Lakes CA 93546

You may request a summary of the assessment be sent to you by contacting:
